

Evalynna Ong

(415) 559 5400 | evalynna.ong@berkeley.edu | 2484 39th Ave, San Francisco

Education

University of California, Berkeley

May 2026

Master of Arts in Statistics

University of California, Santa Barbara

March 2021

Bachelor of Science in Chemistry

Related Coursework: Advanced Data Structures & Algorithms, Data Analysis with Python, Applied Machine Learning, Data Analysis and Machine Learning for Real-World Decision Making, Introduction to Statistical Computing

Professional Experience

Data Analytics Consultant - Public Interest Technology Clinic

January 2026

University of California, Berkeley

- Partner with product teams to deliver data-driven solutions for nonprofit and academic research projects, translating complex analytical findings into actionable business recommendations.
- Engineered a RAG-based query system utilizing LLMs to streamline internal data retrieval for the client, improving response accuracy and reducing manual search time through automated context window optimization.
- Apply advanced analytics techniques including machine learning, statistical modeling, and data engineering to solve real-world business challenges and optimize outcomes
- Develop and maintain analytical frameworks and reporting tools to support data driven decision making across stakeholder groups.

Air Liquide

December 2021 - April 2024

Chemist, Fremont, CA

- Managed full-cycle laboratory workflows for complex projects, from initial work order opening to final reporting within the LIMS environment to ensure data integrity and on-time delivery.
- Established a dynamic inventory tracking system using Google Script to streamline outgoing orders. Improved inventory accuracy through demand-based purchasing adjustments.
- Updated and monitored long-term trends in Ion Chromatography data using Statistical Process Control charts. Developed systematic approaches to root cause analysis, enabling more effective preventative maintenance.
- Built automated communication system that standardized client reporting workflows, reducing manual processing time and improving data delivery consistency.
- Analyzed complex datasets to validate analytical results and deliver clear, actionable insights to customers and internal stakeholders.

Research Chemist, Goleta, CA

- Conducted comprehensive data analysis and created visualizations to track experimental trends, Presenting findings weekly to guide strategic research decisions and project direction.
- Collaborated cross-functionally to translate complex technical data into clear insights for both technical and business stakeholders.

Projects

RAG-based Chatbot

UC Berkeley - May 2026

Working as a consultant in the PIT clinic, our client faced a common scenario many long-standing establishments face: inconvenient documentation. My team provided a RAG-based Chatbot to give stakeholders more direct access to semantic search, outcome evaluation, and document summaries. We conducted stakeholder interviews to best understand our client's needs and fine-tuned our model to the client's specific use cases. This was also a unique opportunity for me to have autonomy over a project and collaborate with peers across multiple programs.

Automated Error Reporting

Air Liquide - April 2024

In my work as a chemist, I regularly faced scenarios that could be solved by leveraging data. At Air Liquide, I identified our inventory management as a problem area and developed a system using QR codes and automated reporting to improve reproducibility in production workflows. By analyzing collected data, I identified actionable insights and implemented process improvements, which boosted efficiency and lowered overhead costs. Inspired by real-world problems I experienced in the lab, I transitioned my career focus to statistics.

Agent-Based Simulation Framework

San Jose State University - April 2025

In my Object Oriented Design course at SJSU, I collaborated with peers to design a simulation architecture following the Model-View-Controller (MVC) design pattern. There, I applied object-oriented programming principles to ensure scalability across implementations. I took the lead and coordinated development tasks among peers and used git and Github for version control and collaboration. This project demonstrated effective teamwork, clean code design, and practical application of collaborative development workflows.

Leadership

California State Parks Lifeguard (2015-2021): Trained in emergency response, public safety, and leadership under high-pressure environments.

UCSB Triathlon Team: Competed as a student-athlete, developing discipline, endurance, and teamwork through intensive training and races.
